

A5.6 Sublittoral biogenic reefs

Código EUNIS: Sublittoral biogenic reefs

Vasco Ferreira / Set. 20 2019 Todos os direitos reservados

Description

This habitat type includes polychaete reefs, bivalve reefs (e.g. mussel beds) and cold water coral reefs. These communities develop in a range of habitats from exposed open coasts to estuaries, marine inlets and deeper offshore habitats and may be found in a variety of sediment types and salinity regimes.
